PRESS RELEASE

ELASTILON

40,000M2 OF WOODEN FLOORING INSTALLED IN SOUTH AFRICA IN 2007 ON **ELASTILON** AND NOT ONE FLOOR FAILURE.

WOW

It is unheard of in the wooden flooring industry to have such results. Steven Suntup who has been involved in the wooden flooring industry for 17 years now says that this statistic is a first. Who would have believed this to be possible. As one knows the problems related to wooden flooring even if installed using correct procedures that one can have, but not with **ELASTILON**. This unbelievable installation system was invented by a wooden flooring fitter in Holland by the name of Fred Van Bers. It took Fred 6 years to finally bring this system on the market, one that would cope with the heavy movement of wood when taking in and releasing moisture from the air through the wet and dry seasons of summer and winter. Yes we have had some floors over expand in the very wet seasons but to resolve this is simple, one would simply take off the skirting and re-cut the expansion gap and Hey presto, the floor is flat again and with no damage at all. Unlike a rigid installation like Nails or Glue when the boards take a tremendous pressure before actually bursting which creates a cupped floor with a major repair and mostly never to be the same again.

creates a cupped floor with a major repair and mostly never to be the same again.

What is **ELASTILON**.

Elastilon is a series of high density mats with one side sticky. The floor is stuck onto this mat with an almost epoxy bond but the mat is not stuck to the screeds. This gives the best of both worlds, in other words the floor is fully glued down but still has full movement over the screeds. The name **ELASTILON** is very relative as this mat has high elastic properties so when the floor expands slightly after installation there is a constant pressure in both directions of the floor ensuring a tight floor. Another plus is that **ELASTILON** now allows for under floor heating with solid wooden floors. So to all architects and home owners, to ensure a successful installation of your wooden floor then ensure that it is installed with **ELASTILON**. Lastly Elastilon is proven itself over the last 10 years in over 20 countries around the world, all with the same results. Of course with such a brilliant innovation we have had the copy cats but with dismal results so ensure that your roll of **Elastilon** mat says **ELASTILON** imprinted on the underside from beginning to end. So it is said again **WOW, 40,000M2 OF WOODEN FLOORING INSTALLED IN SOUTH AFRICA IN 2007 ON ELASTILON AND NOT ONE FLOOR FAILURE**. To find a dealer who uses the **Elastilon** system go to www.suntups.co.za "Find A Dealer" section.

Elastilon carries a world patent. www.elastilon.com
